

ASSIGNMENT 2

NETWORK DESIGN AND SIMULATION FOR A CRITICAL LARGE COMPANY

OBJECTIVES

This assignment is about designing a topology of a network for a critical large company in which different department has some computers in different buildings and setting up their network so that they can interact and communicate with each other by interchanging data. The network is designed and simulated using a Cisco Packet Tracer. Cisco Packet Tracer (CPT) is a multitasking network simulation software that can be used to perform and analyze various network activities such as the implementation of different topologies, selection of optimum paths based on various routers, and analysis of different network configurations.

CASE STUDY

CCC (Computer & Construction Concept) was asked to design a computer network to be deployed in the Headquarters (at Ho Chi Minh City) and two Branches (at Da Nang and Ha Noi) of a BB Bank under construction. The key characteristics of IT usage in this Company are as follows.

The Headquarters:

- The Headquarters building consists of 7 floors, the first floor is equipped with one IT room and Cabling Central Local (using patch panels gathering wires)
- Medium-scale: 120 workstations, 5 servers, 12 networking devices (or maybe more with security-specific devices)
- Using new technologies for network infrastructure including wired and wireless connections, fiber cabling (GPON), and GigaEthernet 1GbE/10GbE. The network is organized according to the VLAN structure for different departments
- The Headquarters subnetwork connects to two Branches subnetworks by 2 leased lines for WAN connection (possibly applying SD-WAN, MPLS) and 2 xDSL for Internet access with a load-balancing mechanism. All traffic to the Internet passes through the Headquarters subnet.
- For software acquisition, the company uses a mix of licensed and open-source software, office applications, client-server applications, multimedia, and database

- Requirements for high security (e.g., firewall, IPS/IDS, phishing detection), high availability (HA), robustness when problems occur, ease of upgrading the system
- Propose a VPN configuration for site-to-site and for a teleworker to connect to Company LAN
- Propose a surveillance camera system for the Company

Branches:

- The building has 2 floors, the first floor is equipped with 1 IT room and 1 Cabling Central Local.
- BB Branch small-scale: 30 workstations, 3 servers, 5 or more networking devices

Implementing the connection between the Headquarters and the Branches through the WAN links, you can choose one of the technologies such as SD-WAN, MPLS, etc. used for this link according to the cost of the solution. **List all available out.**

- Suggest options with cost
- Analyze the advantages and disadvantages of the selected solution.

The dataflows and workload of the system (about 80% at peak hours 9g-11g and 15g-16g) can be shared for Head Office and Branch as follows:

- Servers for software updates, web access, and database access, The total download estimate is about **1000 MB/day** and the upload estimate is **2000 MB/day**.
- Each workstation is used for Web browsing, document downloads, and customer transactions, ... The total download estimate is about **500 MB/day** and the upload estimate is **100 MB/day**.
- WiFi-connected devices from customers' access for downloading are about **500 MB/day**.

BB Bank's Network is estimated to have a growth rate of **20%** in 5 years (in terms of the number of users, network load, branch extensions, ..).

REQUIREMENTS

Step 1 (1 point): Find out suitable network structures for buildings

- Analyze the network system requirements of Headquarters and Branches
- **Make a checklist to be surveyed at the installation locations**
- Define areas with high load (network load) to select the appropriate device configuration (load balancers are placed in necessary locations)

- Choose a network structure that matches the building's architecture with convenience and aesthetics
- Design the network usage in a wireless environment, applying network security standards and setting up partitions for network servers and devices (e.g., Server farm, DMZ, Firewall, ...)

Step 2 (1 point): List of minimum equipment, IP plan, and wiring diagram (cabling)

- List of recommended equipment and typical specifications
- Schematic physical setup of the network
- WAN connection diagram between Headquarters and Branches ((using new WAN technology such as SD-WAN, MPLS and OSPF routing protocol)

Step 3 (1 point): Calculate the required throughput, and expected bandwidth from ISP, then suggest the configuration for the company network

Step 4 (2 points): Design the network map using Packet Tracer or GNS3 simulation software

Step 5 (2 points): Test the system with popular tools such as ping, and traceroute, etc. on the simulated system.

Step 6 (2 points): Re-evaluate the designed network system through the following features: reliability, ease of upgrade, diverse support software, safety, network security, etc.

- The remaining problems for the project
- Development orientation in the future

Step 7 (1 point): Upload the simulation file (using Packet Tracer or GNS-3) and the project report to BKeL before the deadline.

In the report and results demo of Assignment 2, students are asked to test connectivity:

- Connect between PCs in the same VLAN
- Connect PCs between VLANs
- Connect PCs between Headquarters and branches
- Connect to servers in the DMZ
- No connections from Customers' devices to PCs on the LAN

- Connect to the Internet to a Web server.

For the **talented engineer program**, you are required to implement and test a security solution for the Company: apply a security plan, add firewalls and configure ACLs, implement IDS/ISP, and edit a security best practice guide.

REFERENCES

-  Information selectively comes from the Internet
-  The references for the subject of Computer Networking

TIMING

Deadline for reporting: **4 weeks after the assignment uploading.**

Softcopy (to be submitted to BKeL before the deadline) and **hard copy** (needed for presentation and demo session).

NUMBER OF STUDENTS

Get into a group of 2 or 3 students as indicated by the Instructor.
